Amendment to the CUP for long term outdoor storage Narrative

SureCast foundry is requesting the original CUP be amended to allow for on-site long-term storage. As part of the smelting process, it is ideal to stage finished products, molds, castings as well as by-products of the smelting process outside of the main building. Many of these items are cycled on a weekly basis to either the customer or recycling center. We also show an area at the far west end of the site for possible storage trailers.

The plan is to use the area directly behind and adjacent to the building to ensure this storage area is not seen by the public from the street. Please refer to the site plan provided for the location and list of items typically stored on site.

Thank you for your consideration.
