

**Case File No. 21-0060
Christ Lutheran Church**

Proposed Sign: Double-Sided

Proposed Sign: Double-Sided

Christ Lutheran Church desires to install a new sign onto our existing monument base. Our plan is to install a 2'x11' dynamic digital sign (electronic reader board) and a 2'x3'6" internally illuminated ID sign.

The digital sign will enable us to more effectively communicate with:

- Our church members about current events and church activities
- And members of the community about our outreach ministries and other ways to engage our church

The church understands and will comply with the following code regulations:

- A minimum display time of four (4) seconds for each message within the frame of the sign is required.
- All displays must include and utilize an automatic dimming mechanism that allows the display to adjust brightness to accommodate a brighter light intensity during daylight and dimmer light intensity after dusk.

Our proposed sign is being installed onto our existing monument sign base. The overall sign area is slightly less than our current sign.

Thank you.
